Recitation Assignment # 8  
November 28, 2007

For the final recitation, I want you to be creative. You are going to make a game! I will not tell you what game, or how extensive it needs to be. However, you may want to make a game along the lines of:

- Bowling
- Pool (probably just a single shot, not the entire game)
- Pong
- Anything else you'd like to do.

You may pick whatever you want within the following constraints:

1. It must work. I don't care how clever your idea is, if it doesn't work, you don't get full credit.
2. It must incorporate legitimate (and correct) physics at some point in the game.
3. The game must produce a score or an outcome (e.g. win/loss).

Games satisfying the above criteria will get full credit. However, this is the recitation grand championship. All games are to be submitted to Travis by noon on Thursday, December 6, at which point he will post them to the course website. Awards will be given to the best game (as judged by Travis), and to the best game as judged by you (collectively). Please vote by 10am on Friday, December 7.
